CAREER OVERVIEW

Entry level in Ruby on Rails and JavaScript based programming and a background in buying. Possess skills in logic based problem solving, and interpersonal skills that help tech companies thrive in efficiency and teamwork. Previously as an in-store buyer, I was holding down multiple buying responsibilities, as well as the receiving department.

TECHNICAL SKILLS

Ruby, Javascript, HTML, CSS, React.js, Redux, and Ruby on Rails

TECHNICAL PROJECTS

Climb On - [Github Front End](#) | [Github Back End](#) | [Demo](#) | [Lighthouse Score](#)

A social media platform built to connect climbers.

- Used jwt tokens and b-crypt to secure a user's profile, stored users token and id in localStorage to retain crucial information throughout refreshes.
- Implemented Web-Sockets to create an instant messaging system between two users.
- Incorporated Geocoding to find users from varying locations, as well as other advanced database queries.
- Utilized Material-UI and design system to style the application, giving it a professional look.

Igg's Photo Shop - [Github Front End](#) | [Github Back End](#) | [Demo](#) | [Website](#) | [Lighthouse Score](#)

An online mock e-commerce where a user donates money instead of purchasing photos.

- Implemented React Redux with Hooks and functional components to give the application better performance.
- Incorporated download functionality so a user has the option to download photos.
- Created dynamic CSS and leveraged Semantic UI to give the application a higher-end look and feel.
- Stored database information (photos, user information) in Amazon S3 bucket.

Buckleys Cakes - [Github](#) | [Demo](#) | [Website](#) | [Lighthouse Score](#)

(01/14/21 - 01/27/21)

Freelance project for a Client that sells cakes, and cupcakes for special events.

- Utilized CSS & React design system to style the clients website.
- Incorporated dynamic multi-image-carousel to give the client the ability to upload as many photos as desired, carousel also responds to users viewport.
- Created a Flickr account for the client to use as a substitute backend. Website queries Flickr account and pulls all photos within the account, this gives the client a user friendly CRUD environment.
- Integrated Email.js so orders that are filled within the website are sent to the clients business email.

RELEVANT EXPERIENCE

Freelance Web Developer

- Working with Clients to build web applications to promote presence on the internet.
- Collaborating with Clients to edit, and improve their websites.

Open Source

- Contributed to Zooniverse Mono-repo by fixing bugs.
- Contributing to Homebrew to fix issues with the package manager.

NYC Open Data Trash Warriors Hackathon

- Worked with a team of Developers, Designers, UI/UX Researchers, and more to build an application where users around New York City are able to organize and assemble to clean the streets of New York City.
- Contributed throughout the entire process of building the application, from initial project brainstorming, to building reusable components, incorporating authorization, and more.
- Recognized as a key contributor to the project.
